With a host of questions in mind, we disassembled the Huawei RRU3908, an outdoor wireless base station with 20/40 watts of output power per RF front end. The duplexer in this base ...

Power Supply Unit (PSU): This provides the necessary electrical power to operate the base station components. It ensures that all parts of the base station have a consistent ...

At a 5G launch event in Beijing, Huawei announced the innovative chip that will support simplified 5G networks and large-scale 5G network ...

Deep Dive Teardown of the Huawei BBU5900 5G Base Station The Huawei BBU5900 5G base station contained only one IC on the backplane board, provided by ...

At a 5G launch event in Beijing, Huawei announced the innovative chip that will support simplified 5G networks and large-scale 5G network deployment all over the globe. Reportedly, to date, ...

TSMC chips are at the heart of a key component, known as the baseband, of Huawei"s 5G base stations.

This chip is highly integrated, which means it can support large-scale integration of active power amplifiers (PAs) and passive ...

The 5G-A smart base station (5G-A52) released by Huawei this time integrates the Ascend AI chip (presumably Ascend 910B or a customized version) in the base station hardware for the ...

Deep Dive Teardown of the Huawei BBU5900 5G Base Station The Huawei BBU5900 5G base station contained only one IC on ...

This chip is highly integrated, which means it can support large-scale integration of active power amplifiers (PAs) and passive antenna arrays into very small antennas. It also ...

Where does the chip in it come from? In fact, it"s nothing, either the chips left over from before are still being used; or these chips are produced by Chinese domestic companies.

Each RF front end delivers 20/40 W output power. The duplexer appears to be an iris-coupled cavity filter with some inter-cavity coupling. Input and output coupling use a T ...
