What size inverter do you need to run a drill?

Consequently, to run a 1000W power tool, you'll need a 1200W inverter. In addition, your inverter must be able to handle a power surge when the tool starts. The power surge only lasts 1 to 3 seconds at max and can be as high as 2 times the rated power of your power tool. **What Size Inverter Is Needed To Run A Drill?**

Do power tools need an inverter?

An inverter is a convenient way to supply AC electricity from a battery and power equipment in an off-grid situation. We demonstrated that power tools are inductive loads prone to power surges and require around 20 to 25% extra power vs. their rated power to function correctly.

Can a 1000W power tool run a 1200W inverter?

On average, the power factor for this type of equipment is 0.8. Consequently, to run a 1000W power tool, you'll need a 1200W inverter. In addition, your inverter must be able to handle a power surge when the tool starts. The power surge only lasts 1 to 3 seconds at max and can be as high as 2 times the rated power of your power tool.
