The output transformation you need (spaces to %20, forward slashes to %2F) is called URL encoding. It replaces (escapes) characters that have a special meaning when part of a URL ...

I am interested in knowing why "%20" is used as a space in URLs, particularly why %20 was used and why we even need it in the first place.

As the aforementioned RFC does not include any reference of encoding spaces as +, I guess using %20 is the way to go today. For example, "%20" is the percent-encoding for ...

@MetaByter I think it is more technically correct to phrase the question as "In a URL, should I encode the spaces using %20 or + in the query part of a URL?" because while the example ...

I'm using Windows as a simple user (I don't have any admin rights) and want to install NodeJS LTS. On the download site I have the choice to download only the binary ...

Since it's not mentioned anywhere in the grammar, the only way to encode a space is with percent-encoding (%20). In fact, the RFC even states that spaces are delimiters and should ...

Set the JAVA\_HOME Variable Windows 7 - Right click My Computer and select Properties &gt; Advanced Windows 8 - Go to Control Panel &gt; System &gt; Advanced System Settings Windows ...
