A control station is a base station used in a system with a repeater where the base station is used to communicate through the repeater. A temporary base is a base station used in one location ...

Introduction
Functions of BscArchitecture of BscKey Features of BscConclusion
A Base Station Controller (BSC) is a critical component of a cellular network that serves as the interface between mobile devices and the Mobile Switching Center (MSC) or Radio Network Controller (RNC). The BSC is responsible for managing and controlling multiple Base Transceiver Stations (BTS) within a given area, allowing for the efficient use of...

Provides transmission and reception of signals. It also does sending and reception of signals to and from higher network entities (like the base station controller in mobile telephony).
