XING Mobility unveils the world's first immersion-cooled 800V BBU at CES 2026, alongside Caterham Project V and XBE1000 ESS, demonstrating decade-validated ...

Powered by XING Mobility's proprietary IMMERSIO(TM) liquid immersion-cooled battery system, the XBE1000 offers flexible capacity configurations ranging from 200 kWh to 1 ...

Direct liquid cooling, also known as immersion cooling, is an advanced thermal management method where battery cells are submerged directly into a dielectric coolant to ...

This paper discusses the effectiveness of immersion cooling at various flow rates and proposes a novel droplet cooling method that ensures thermal homogeneity in the battery ...

What is immersion cooling? Immersion cooling is an advanced cooling technology in which battery cells are submerged in a dielectric (non-conductive) fluid that directly absorbs ...

What is immersion cooling? Immersion cooling is an advanced cooling technology in which battery cells are submerged in a dielectric ...

Immersion cooling (IC) technology, recognized for its exceptional heat transfer performance, has emerged as a promising solution for battery thermal management systems ...

Liquid cooling technology meets these challenges head-on. It allows for a more compact system design because it removes heat more efficiently in a smaller volume.

Liquid Cooling Technology offers a far more effective and precise method of thermal management. By

Battery cabinet immersion liquid cooling technology

circulating a specialized coolant through channels integrated within or ...

Learn how immersion cooling enhances thermal efficiency, safety, and reliability for EV batteries and data centers, reducing energy ...

XING Mobility is bringing 800V immersion-cooled batteries to AI data centers, starting with a CES 2026 debut.

Learn how immersion cooling enhances thermal efficiency, safety, and reliability for EV batteries and data centers, reducing energy consumption, optimizing space, and ...
