The case study focuses on rural distribution grids in Southern Germany, projecting the repercussions of different charging scenarios by 2040. Besides a Vehicle-to-Grid scenario, ...

lectric taxis and buses, as a mode of transportation, is rapidly increasing in cities. In addition to providing economic and environmental benefits, these fleets can potentially participate in the ...

The Bidirectional Charging project, which began in May 2019, aimed to develop an intelligent bidirectional charging management system and associated EV components to ...

In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be ...

In this work, a novel energy storage system consisting of a hybrid storage system and an intelligent and bidirectional charging station ...

While challenges remain, ongoing advancements in technology, supportive regulatory frameworks, and increased consumer ...

Instead of just consuming electricity, electric vehicles can actively contribute to grid stability through bidirectional charging. They store surplus energy - ...

emphasizes the role of bidirectional charging, where EVs not only consume energy but also supply it back to the grid during peak demand. enhancing grid stability. The investigation ...

In contrast to stationary storage and generation which must stay at a selected site, bidirectional EVs employed as mobile storage can be mobilized to a site prior to planned outages or arrive ...

This paper introduces a novel testing environment that integrates unidirectional and bidirectional charging infrastructures into an existing hybrid energy storage system.

In this work, a novel energy storage system consisting of a hybrid storage system and an intelligent and bidirectional charging station was shown. The technical properties of the ...
