What is a grid-connected photovoltaic power generation policy?

The policy provides that the grid-connected photovoltaic power generation project, the state will in principle by photovoltaic power generation system and its supporting transmission and distribution projects to give 50% of the total investment subsidies.

What is grid parity for photovoltaic systems?

Grid parity for large installation and small roof-top systems was already reached in 2011 and 2012, respectively. As of July 2014, feed-in tariffs for photovoltaic systems range from 12.88 ¢/kWh for small roof-top system to 8.92 ¢/kWh for large utility scaled solar parks. Feed-in tariffs are restricted to a maximum system capacity of 10 MW.

Financial incentives for photovoltaics are incentives offered to electricity consumers to install and operate solar-electric generating systems, also known as photovoltaics (PV). Governments offered incentives in order to encourage the PV industry to achieve the economies of scale needed to compete where the cost of PV-generated electricity is above the cost from the existing grid. Such policies were implemented to promote national or territorial energy independence
