-----

In this trend towards next-generation smart and integrated energy-communication-transportation (ECT) infrastructure, base stations are believed to play a key role as service hubs.

In today's 5G era, the energy efficiency (EE) of cellular base stations is crucial for sustainable communication. Recognizing this, Mobile Network Operators are actively prioritizing EE for ...

In this paper, hybrid energy utilization was studied for the base station in a 5G network. To minimize AC power usage from the hybrid energy system and minimize solar ...

This paper develops a method to consider the multi-objective cooperative optimization operation of 5G communication base stations and Active Distribution Network (ADN) and constructs a ...

Within this model, we leverage the flexibility of mobile small-cell base stations (MSBS) to seamlessly traverse service regions. We compute the transmission power and ...

Grounded in the spatiotemporal traits of chemical energy storage and thermal energy storage, a virtual battery model for base stations is established and the scheduling ...

Renewable energy harvesting has proved its extraordinary potential in green mobile communication to reduce energy costs and carbon footprints. However, the stochastic ...

The 5G communication base station can be regarded as a power consumption system that integrates communication, power, and temperature coupling, which is composed of three ...

The communication base station hybrid system emerges as a game-changer, blending grid power with

renewable sources and intelligent energy routing. But does this technological fusion truly ...

In this paper, hybrid energy utilization was studied for the base station in a 5G network. To minimize AC power usage from the ...
