What is irfb4110 MOSFET?

IRFB4110 MOSFET Datasheet: N-Ch,100V,180A. Full specification with pinout and replacement list The IRFB4110 is a high-performance N-channel MOSFET designed for fast switching and high-current applications. It features a low $R_{DS(on)}$ of 4.5m Ω , enabling efficient power handling and minimal heat generation.

Why should you choose irfb4110?

Its robust gate charge ensures rapid switching, reducing losses in high-frequency circuits. The TO220 package provides excellent thermal dissipation. IRFB4110 combines high efficiency, reliability, compact design for demanding power electronics.

Who is irfb4110?

The company has operations in several countries and is one of the leading suppliers of power devices and diodes in the Asia-Pacific region. *This information is for general informational purposes only, we will not be liable for any loss or damage caused by the above information. Part #: IRFB4110. Download. File Size: 137Kbytes. Page: 2 Pages.

Calculated continuous current based on maximum allowable junction temperature. Bond wire current limit is 120A. Note that current limitations arising from heating of the device leads may ...

In this post we are going to discuss about IRFB4110 MOSFET pinout, specs, equivalent, applications, where and how to use it and other useful information about this N ...

The IRFB4110, for example, handled medium to high power loads smoothly, switching up to 100V at peak currents of 130A, making it a solid choice for DIY inverters and ...

High Efficiency Synchronous Rectification in SMPS .Uninterruptible Power Supply .High Speed Power Switching .Hard Switched and High Frequency Circuits

Inchange Semiconductor Company Limited is a Chinese semiconductor company that was founded in 1997. The company provides a wide range ...

The IRFB4110 is a high-performance N-channel MOSFET designed for fast switching and high-current applications. It features a low $R_{DS(on)}$ of ...

Inchange Semiconductor Company Limited is a Chinese semiconductor company that was founded in 1997. The company provides a wide range of products including discrete and ...

The IRFB4110 is a high-performance N-channel power MOSFET manufactured by Infineon Technologies (formerly part of International Rectifier). It's designed for use in high ...

Calculated continuous current based on maximum allowable junction temperature. Bond wire current limit is 120A. Note that current limitations arising from heating of the device ...

The IRFB4110 is a high-performance N-channel MOSFET designed for fast switching and high-current applications. It features a low $R_{DS(on)}$ of 4.5m Ω , enabling efficient power handling ...
