What is an uninterruptible power supply (UPS)?

However, typical desktop computers, routers, and similar devices still need to be plugged into a power source all the time to work. That's where an uninterruptible power supply (UPS) comes in. Its main function is to act as a big battery that powers your devices when your electricity goes out.

Is an uninterruptible power supply worth the investment?

But if you want to keep your home Wi-Fi network and some other key electronics up and running in the event of an outage, an uninterruptible power supply, or UPS, is worth the investment.

What is a good uninterruptible power supply?

The UPS uses an internal battery for this, and in essence it keeps your plugged-in devices running for a period of time. My chosen brand uninterruptible power supply, CyberPower, is great for low voltages (brownouts), over voltages (spikes), and power outages. Its Line Interactive technology and automatic voltage regulation is excellent.

Can an uninterruptible power supply be a long running emergency power source?

First, the uninterruptible power supply is not designed to be a long running emergency power source. It depends what's connected to it and the associated power demands. The UPS is intended as temporary power to protect electronic equipment from short term outages as well as voltage fluctuations from the grid.

I have found what I consider to be the best UPS (uninterruptible power supply) for home use with devices such as a WiFi internet router, computers, and other electronics.

An uninterruptible power supply (UPS) or uninterruptible power source is an electrical apparatus that provides emergency power to a load when the input power source or mains power fails.

When you're looking to Choose an Uninterruptible Power Supply, you'll come across three main types, each with unique strengths and use-case scenarios. Standby (Offline) UPS.
