Welcome to Madrid's energy landscape, where solar power and energy storage solutions are rewriting Europe's renewable playbook. With Spain aiming for 22.5GW of energy ...

Spain has launched an ambitious EUR700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage.

While initial investigations cited a combination of transmission failure and sudden renewable generation drops, energy experts are now pointing to Spain's underdeveloped ...

One solution is to build in "synthetic" forms of inertia, such as flywheels, which store energy as they spin, ready to be released back into the grid when necessary.

To accelerate deployment, the European Commission approved a EUR700 million aid package for energy storage in Spain. Managed by IDAE, the program offers up to 85% co ...

Europe's made enormous steps in the green energy transition, undeniably with great success. Nevertheless, we have a long way to go, ...

An underdeveloped power grid, not a rapid buildout of solar panels, was the mostly likely cause of the devastating blackout that hit Spain and Portugal April 28, even ...

Europe's made enormous steps in the green energy transition, undeniably with great success. Nevertheless, we have a long way to go, and for this to succeed, we need to ...

The Iberian blackout reflects Europe's need for stronger grid connections and expanded storage capabilities to keep pace with renewable growth.

Madrid has excess energy storage
