How does a 5G base station work?

The 5G Base Station uses a set of antennas that connect with the distributed unit. These antennas can be implemented using a passive or active architecture. These are connected to the Base Station cabinet using feeder cables. The Base Station cabinet includes the transceiver and RF processing functions.

Can NSA base stations evolve from 4G to 5G?

NSA Base Stations can provide an evolution path from 4G to 5G. Figure 22 illustrates two configurations for Non-Standalone Base Stations using the 4G Core Network. These configurations, known as 'option 3' and 'option 3a', can be deployed before introducing the 5G Core Network.

What is a 5G Brain Center?

Often referred to as the brain center, this includes: Baseband Unit (BBU): Handles baseband signal processing. Remote Radio Unit (RRU): Converts signals to radio frequencies for transmission. Active Antenna Unit (AAU): Integrates RRU and antenna for 5G-era efficiency. 2. Power Supply System
