What is a solar water pumping system?

A solar water pumping system consists of a PV array, a motor, and a bore pump. Solar water pumping arrays can have permanent mounts, or installers may place them on passive trackers to increase pumping time and volume. Both AC and DC motors with centrifugal or displacement pumps are used in these circumstances.

What is the cost of a solar water pump?

Solar water pumps can cost as little as less than \$1,500 for the most inexpensive models, while large systems can cost over \$20,000. The cost can be reduced through Renewable Energy Certificates (RECs). Most solar water pumps rarely exceed 2 horsepower in size.

Can a solar water pump be used for a pond?

Suitable for fountains, features or small waterfalls. Solar DC water pumps are ideal for ponds as a spray fountain without the need for cables running across your lawn. Also suitable for a small waterfall, simply attach a hose to the top of the pump. Perfect for creating a new fountain, waterfall anywhere in the pond, yard or patio.

What is DC Solar brushless motor pump?

DC solar brushless motor pump, which is the biggest breakthrough since traditional solar diaphragm motor pump, eliminates the troublesome repairs and replacements of the latter.
