---

Agrivoltaic policy governs the co-location of solar energy and agriculture systems. Agrivoltaic policy is rapidly emerging at the state and federal level.

Local officials can ensure ordinances do not prevent dual-use solar by creating refined definitions for solar generation, farmland, and farm use within the county's zoning and siting regulations.<sup>7</sup> ...

Dual-use solar, meaning the co-location of solar with another land use, is one such budding solution. It has the potential to provide added environmental, social, and economic ...

Dual-use solar PV involves the co-location of electricity generation and a non-energy use on the same land at the same time--that is, generating electricity on the land while also using the ...

Dual-use solar, also known as multi-use solar, is the co-location of solar power production and other productive land uses, such ...

By integrating solar energy systems into existing landscapes, dual-use PV and has the potential to minimize land-use concerns and creates ...

Dual-use solar, also known as multi-use solar, is the co-location of solar power production and other productive land uses, such as agriculture or ecosystem services. ...

Despite its benefits, dual use PV installation remains far below potential due to various barriers and insufficient legislation adaptation. This publication provides an overview of dual-use PV ...

Research on multi-use solar--combining solar energy with agriculture (agrivoltaics) or natural vegetation (ecovoltaics)--is developing rapidly, but interdisciplinary integration is ...

By integrating solar energy systems into existing landscapes, dual-use PV and has the potential to minimize land-use concerns and creates opportunities for more aesthetically pleasing solar ...

Dual-use solar is the practice of solar photovoltaic (PV) technologies sharing the same land with other uses, usually agricultural such as crop production. The terms agrivoltaics and colocation ...

Agrivoltaics (also known as dual-use solar and agrisolar) pairs solar power generation with agriculture, generating energy and providing space for crops, grazing, and pollinator and ...
