With the passage of the royal decree earlier this week, Spain has slightly increased its target for energy storage from the previously ...

Renewable generation is now joined by storage projects, and Spain occupies a prominent place as the country with the second largest projected capacity for stand-alone ...

But the sunlit uplands of solar have begun to overheat. Spain has built so much solar capacity that at certain times of day it produces ...

For the first time, Red Electrica included data on energy storage, such as batteries and pumped-hydro. Spain's installed storage ...

Its updated National Energy and Climate Plan (PNIEC) sets ambitious goals: 76GW of solar and 22.5GW of energy storage by 2030. This plan is backed by EUR236bn in ...

Spain surpassed its 2020 target set by the Renewable Energy Directive, achieving a RES share that was 1.2 percentage points higher than the 20% goal. Energy storage also ...

For the first time, Red Electrica included data on energy storage, such as batteries and pumped-hydro. Spain's installed storage capacity now stands at 3,356 MW.

Spain has an installed energy storage capacity of 3,356 MW, which allowed the integration of 8,666 GWh into the system this year. The reports presented today by Red Electrica also ...

In April 2025, a sharp power outage hit parts of southern and central Spain -- not during low supply, but at the
