"super" object has no attribute "__sklearn_tags__". This occurs when I invoke the fit method on the RandomizedSearchCV object. I suspect it could be related to compatibility ...

As for chaining super::super, as I mentioned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences ...

Based on the charge storage mechanism, supercapacitors can be classified into three main categories, such as (i) electrochemical double-layer capacitors; (ii) pseudocapacitors; and (iii) ...

Cornell Dubilier supercapacitor products are offered in a full range of capacitance values and configurations. This enables utilization of supercapacitors in a variety of industries ...

Electrochemical capacitors, which are commercially called supercapacitors or ultracapacitors, are a family of energy storage devices with remarkably high specific power compared with other ...

super() is a special use of the super keyword where you call a parameterless parent constructor. In general, the super keyword can be used to call overridden methods, ...

Cornell Dubilier supercapacitor products are offered in a full range of capacitance values and configurations. This enables utilization of supercapacitors in a variety of industries and ...

How a supercapacitor can transcend the limitations of traditional super capacitors? To transcend the limitations of traditional supercapacitor, efforts have been taken to design thin, lightweight, ...

Our supercapacitors have been developed to meet the growing need for sustainable energy storage in wireless

electronics. They offer the same ...

The one without super hard-codes its parent's method - thus is has restricted the behavior of its method, and subclasses cannot inject functionality in the call chain. The one ...

Our supercapacitors have been developed to meet the growing need for sustainable energy storage in wireless electronics. They offer the same benefits as conventional supercapacitors ...

I'm currently learning about class inheritance in my Java course and I don't understand when to use the super() call? Edit: I found this example of code where super.variable is used: class A { ...
