The centerpiece of this initiative is the construction of five state-of-the-art power plants--four gas-powered and one solar--that will collectively supply over 50% of Syria's ...

The solar power station, which would be based in the Damascus countryside, is part of a new investment opportunity designed to attract energy investors to finance, build, and ...

The agreement provides a framework for conducting detailed technical and commercial studies on existing power plants and the national grid, as well as evaluating and ...

Syria is building a 100-megawatt solar power station near Damascus to boost its renewable capacity. Learn how this project enhances energy security and sustainability.

In June 2025, Syria signed a US\$7bn agreement with a consortium from Qatar, Turkey, and the United States to rebuild its power ...

Well, there you have it - Syria's energy future isn't about choosing between survival and sustainability. With smart storage solutions, it can achieve both simultaneously.

In the short to medium term, it should support energy generation in Syria, especially in renewable electricity. In the longer term, it should offer Syria a role in an interconnected ...

In 2010 oil accounted for about a quarter of Syria's income, estimated as \$3.2bn for 2010, and almost all oil exports were to the EU. Production was 400,000 barrels per day (64,000 m³/d) in 2009 and exports about 150,000 barrels per day (24,000 m³/d), mainly Germany, Italy and France. According to BBC oil reserves were 2.5bn barrels in 2010. During the civil war before the fall of Assad the co...
