Can a supercapacitor be used for smart water meters?

At present, the use of supercapacitors instead of lithium batteries for smart water meters is a very popular choice. A supercapacitor is a passive device that is interposed between a battery and a common capacitor. Super capacitors are used in gas alarms to provide backup power to provide escort for safety.

What are smart supercapacitors?

Accordingly, smart supercapacitors have been widely focused on and studied by researchers recently with the introduction of intelligent functions, such as electrochromism, self-healing, and shape memory, into supercapacitors to broaden their application fields and promote their smart development.

Why do smart electricity meters use super capacitors?

In order to support this requirement, smart electricity meters typically use super capacitors to store the required energy. Super capacitors provide good energy density per cm<sup>3</sup>, and are easily recharged once mains power is restored, making them a popular choice compared to batteries.

What are the trends in smart supercapacitor technology?

Trends in smart supercapacitor technology To meet the urgent smart capacitor requirements for our daily life, one has to consider cost-effective and scalable microfabrication techniques such as photolithography, laser scribing, and inkjet printing.
