-----

This paper is a study of the dynamical model of the grid-connected voltage source inverter, which is extracted by the state-space averaging (SSA) method. This model is verified by applying the ...

By using a dq decomposition technique with the grid voltage as phase reference, the inner current control loop decouples the current into d and q components.

Two sets of files are proposed, suitable for implementing the control and simulating its behavior in MATLAB Simulink or Plexim PLECS ...

The major objective is to inject and control 100 kW of three-phase, two-stage solar PV power into the grid in order to maintain a constant voltage independent of variations in ...

To solve the two problems, a continuous control set-model predictive control (CCS-MPC) method based on the optimization theory is ...

To solve the two problems, a continuous control set-model predictive control (CCS-MPC) method based on the optimization theory is proposed in the two-phase ...

By reconnecting the inverter to the electrical grid, it becomes possible to provide power in grid-off mode. Inverter-interfaced distributed generators (DGs) rely on control methods to drive the ...

Proposed in this article is bidirectional real and reactive power control of a three-phase grid-connected inverter under unbalanced grid conditions using a proportional ...

Grid-connected inverters are essential in this situation because they transform DC electricity from renewable

sources into grid-safe AC power. This abstract outline a proportional ...

The inverter power and power from the grid steady-state performance shows how well the GWO + PID control method works to guarantee a steady power supply under various ...

In this article, a novel control method of the grid-connected inverter (GCI) based on the off-policy integral reinforcement learning (IRL) method is presented to solve two-stage ...

The major objective is to inject and control 100 kW of three-phase, two-stage solar PV power into the grid in order to maintain a ...
