To address RQ1 (How can UAVs be employed to support emergency communication systems?), we analyzed deployment scenarios subject to environmental, technical, and geographical ...

In this paper, we optimize the flight path of UAV airborne base station (ABBS) in 5G emergency communication networks. Firstly, we propose the comprehensive signal loss ...

We develop a prototype of a proposed mobile base station and test its operation in an outdoor environment. The experimental results provide a sufficient data rate to make an independent ...

Today, all city departments share an online flight management tool that tracks each agency's request and flight schedule to ensure the city maintains continued communications before, ...

One of the most prominent application scenarios involves mounting base stations on board UAVs to provide connectivity in areas where it is in-sufficient or absent.

We propose a mechanism to deploy UAVs as aerial base stations to provide network connectivity, QoS support, and reliable communication in a flash crowd and ...

CHS supports calls routed from Army telephone networks and commercial (non-government) sources via NG-911 Emergency Services IP Network (ESInet) to automatically deliver 9-1-1 ...

This standard specifies technical requirements for emergency cellular communication systems based on large fixed-wing unmanned aircraft systems. It provides the ...

We develop a prototype of a proposed mobile base station and test its operation in an outdoor environment.

Unmanned emergency communication command base station

The experimental results provide a sufficient data rate to make an ...

The collaborative deployment of multiple UAVs is a crucial issue in UAV-supported disaster emergency communication networks, as utilizing these UAVs as air base stations can ...
