What is the difference between `.size()` and `.length` ? Is `.size()` only for arraylists and `.length` only for arrays?

As you know, matlab deals mainly with matrices. So, the size function gives you the dimension of a matrix depending on how you use it. If you say `size(A)`, it ...

Here's a hint: My absolute largest repository contains only images of various formats, it's an "artwork" repo of icons which I use in various apps. Yet, GitHub reports the size as 0.

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

If the size of the `int` is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have ...

`typedef size_t intc; // (instead of unsigned int) typedef ssize_t uintc; // (instead of int)` Because `strlen`, `string`, `vector`... all use `size_t`, so I usually use `size_t`. And I only use `ssize_t` when it may ...

The approach basically builds on other work where people experimentally identified the size of primitives and typical Java objects and then apply that knowledge to a ...

The OP was asking "Array.size () vs Array.length". From the previous discussions, it was make clear, that the "size" Function is not part of standard JavaScript but implemented ...

So, the size of `size_t` is not specified, only that it has to be an unsigned integer type. However, an interesting specification can be found in chapter 7.18.3 of the standard: limit of `size_t` ...

# What is the size of the solar 570 panel

In this case, depending upon what your use case is, you might be better off using int (or long long) for s1 and s2. There are some functions in C/POSIX that could/should use size\_t, but don't ...
