What is the difference between wave, waveform, and signal? Or do they have the same meaning? Can they be used in place of one another?

While building and simulating the inverted op-amp circuit, we were asked to take a look at the clipping of the waveform in sinusoidal form (pictured below). I understand that ...

The result (of the slope values) will be a waveform that switches from a positive value (on the rise ramp) to a negative value (on the fall ramp) and that describes a square ...

The peak-to-peak amplitude is defined as the difference between the largest and smallest voltages in your waveform. A DC offset will not change the peak-to-peak amplitude as ...

A rectifier shown below is for a fully inductive load with a power of 10 kVA (18). Draw and calculate the output voltage waveform, the waveforms and magnitudes of the ...

voltage waveform sine-wave rms square-wave See similar questions with these tags.

I'm trying to understand the meaning of 8 x 20-us and 10 x 1000-us standardized transient impulses (or sometimes it's called a waveform). But what does it actually mean.

How to plot the real scale waveform data? Do I have to multiply it with vertical scale? You can do that, or use another factor based on scope probe attenuation or other ...

What do you mean "the waveform is quantized"? If you expect something continuous coming out from a digital simulation, I have bad news for you. The graphing tool interpolates ...
