AI is transforming factories, optimizing production, cutting costs and boosting sustainability - the Global Lighthouse Network provides examples.

Building the factories of the future Microfactories certainly look like the factories of the future, but how does a manufacturer know if it should change its entire operational setup in ...

To succeed, manufacturers must embrace artificial intelligence (AI) and its latest advancement - AI agents - which push the boundaries of innovation and transform factories. ...

As Anish Shah, CEO of Mahindra Group, explained during the Keeping up with Smart Factories session, their digital transformation has enabled real-time production ...

A new report from the World Economic Forum identifies factories of the future that are reshaping manufacturing through the early adoption of game-changing technologies.

In smart factories, AI optimizes energy consumption, predicts maintenance needs, and fine-tunes production in real time. In logistics, it orchestrates fleets and warehouses with ...

132 factories are now engaged in the network, implementing advanced manufacturing technologies and boosting productivity, sustainability and resilient supply chains.

Connected factories track the location of labour, materials, machines, and moveable assets in real time. IIoT digitizes the production environment by integrating the ...

Global challenges are rewiring supply chains and manufacturing companies are rethinking their operations.
